Summer Water Schedule

We have enough water to keep everyone's gardens, plants and lawns thriving. Our limitation is the pumps and pipes that distribute to your homes. That is why it is so important that all of us don't try and water outside at the same time.

Our system will support demand up to 200 gallons a minute. If we exceed that amount the pumps automatically shut off to protect themselves from overheating. The pumps then require manual restart, which means no one will have water till one of your board members can physically go to the pump house and turn the water back on.

If we spread our usage over the entire day our well pumps can keep up and the system pumps can maintain pressure. Please adjust your automatic sprinkler systems to follow the schedule below:

If you have an automatic sprinkler system and you live on Hebb Park Road if you could set it to start at any time after 8:00 AM every other day on odd numbered days we would appreciate it.

If you have an automatic sprinkler system and you live on Riverwood or Riverbend Drive if you could set it to start any time after 8:00 AM every other day on even numbered days, we would appreciate it.

If you have an automatic sprinkler system and you live on River Lane Road if you could set it to start at 8:00 AM every other day on odd numbered days we would appreciate it.

For all of us that don't have automatic sprinkler systems please limit your outdoor watering to every other day.

Thank you for your cooperation. With this schedule everyone will have plenty of water to get ready to start the day and plenty to keep our yards green and plants thriving.

Now is the time to fix leaks in your sprinkler systems and look for wet spots in places they shouldn't be. If you see any suspicious wet spots please let your waterboard know.

Thanks again for your patience and cooperation.
